

PALIGHT® PRINT

Brightest Economical Foam PVC Substrate

Overview

PALIGHT® PRINT is a printing-grade foam PVC sheet with a high white point for vivid color reproduction, and a lighter weight than PALIGHT Premium, making it an ideal substrate for cost-sensitive, fast-turn or high volume projects.

PALIGHT PRINT is the better choice for every day, competitively priced digital or screen print applications, or projects that do not require the added performance and rigidity of PALIGHT Premium or PALBOARD®.

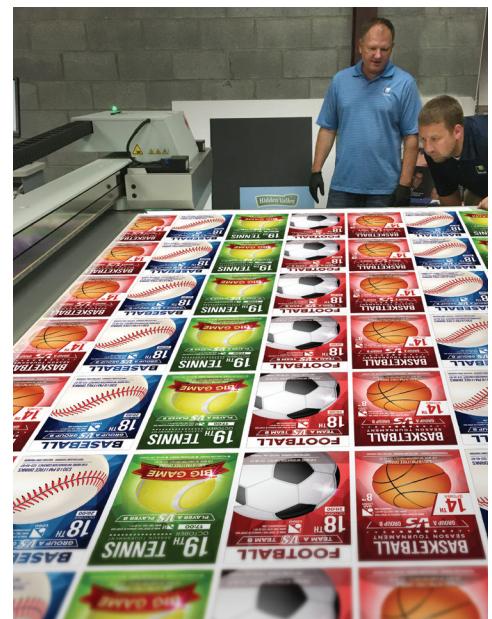

Lightweight PALIGHT PRINT is easy to handle and install and is less expensive to ship. It's also well suited for overhead projects with weight restrictions.

Main Benefits

- The smooth and uniform surfaces of PALIGHT PRINT serve as an ideal substrate for print inks, enabling smooth gradations, and homogenous area cover.
- EverClean™ protective film is standard on one side for better dent and scratch resistance.
- Uniform sheet thickness promotes better ink adhesion, resulting in improved image quality and increased display duration.
- Bright white color yields wider color gamut and accurate color imaging.
- Its lightweight physical properties make it easy to handle, cut and install.
- A great solution for indoor advertising applications due to its resistance to chemicals and humidity.
- PALIGHT PRINT is produced using pre-consumer recycled content and is 100% recyclable.

Typical Applications

- Signage
- Promotional decoration
- Model making and lightweight decor
- Mounting surface for painting, photos, vinyl & film
- Temporary displays
- Wayfinding
